Polytwelve Update History

Ticco Ross · current version 0.6.0

Up to 0.5.1

1. Polytwelve, a 12-voice synthesizer built from the Polysix 2 Reaktor ensemble, as AU, VST3 and standalone for macOS, then VST3 for Windows and VST3/LV2 for Linux, built automatically on GitHub.
2. Preset manager with factory and user presets, favourites, previous/next and preset files.
3. Chord Memory with a chord-name display, Unison mode, glide with legato, and the arpeggiator with host sync.
4. Chorus, Phaser and Ensemble effects, pitch and mod wheels, analog drift and detune.
5. PDF user manual in every build.

0.6.0: New panel

6. A completely new, photo-realistic hardware panel: navy metal with section boxes, cream knobs, black rubber buttons with red LEDs, slide switches, pitch and mod wheels, an amber preset display and red LED displays.
7. Layout and controls:
   - Sections in signal order: VCO, VCF, VCA, EG, MG on top; WHEELS, VOICE, ARPEGGIATOR, EFFECTS, MASTER below.
   - OCTAVE, WAVEFORM, SUB OSC, VCA MODE, MG MODE, VOICE MODE and the arpeggiator RANGE and MODE are now slide switches.
   - EFFECTS has a lit button for each effect.
   - SYNC RATE and BEND RANGE are LED displays, set with arrows, dragging or the mouse wheel.
   - The stored chord is shown next to VOICE MODE.
8. Preset strip with < > SAVE BANK ★. BANK opens the browser, which now also has Delete and Step Through Favourites Only.
9. The window can be resized and keeps its shape.
10. New About window (click the logo) with version and contact details.
11. The manual is rewritten for the new panel, and this update history ships with every build.
